PHOTO 185. Harbor entrance at Scheveningen, The Netherlands. This is the inside slope of the northern concrete-block breakwater of the outer harbor at Scheveningen on the Dutch North Sea coast. Seaward of the harbor entrance, waves and currents appeared to be carrying sand across the mouth of the harbor from left to right at the time of the photo (9 July 1990). The light is several hundred meters from the shoreline. The "red-right-returning" rule familiar to American boaters does not apply in these waters.
